ManufacturerAgilent

Description

The ZORBAX 300SB-C8 Narrow Bore column by Agilent is a reversed-phase HPLC column designed for peptide/protein applications. It uses fully porous silica with a 300 Å pore size (suitable for large molecules) and is packed with 5 µm particles in a narrow bore format (2.1 mm I.D. × 150 mm) to provide efficient separations under relatively moderate pressure. The C8 bonded phase offers less hydrophobic retention compared to C18, making it a good choice when slightly faster elution or reduced retention of large hydrophobic biomolecules is desired.

Specifications
Column: inner diameter × length: 2.1 mm I.D. × 150 mm length
Particle size: 5 µm
Pore size: 300 Å
Stationary phase / bonded phase: C8 (octyl) reversed phase
Packing type: Fully porous silica particles

Comes with our 90-day warranty.

Biotech Equipment Sales, Inc.: based in South San Francisco, the Biotech capital of the world, since 2009. We are dedicated to bringing high-quality pre-owned laboratory instrumentation to our scientific community.
