Description

Windshielded, six-place rotors with aluminum rotor yoke and removable aluminum swinging buckets for use in the Avanti™ J-HC and J6 Series centrifuges. Ideal for rapid sedimentation of protein precipitates, large particles, cells, and cell debris. Suitable for binding studies and separating serum from whole blood.

This rotor has a capacity of 6L or six blood bags. The buckets are interchangeable with microplate carriers (sold separately); each carrier holds three microtiter plates.
