Description

!!!! - RECENTLY SOLD - !!!!

Ideal for research and clinical microbiology, the SANYO CytoGROW GLP CO2 incubator offers a high-performance solution for mainstream cell culture applications in the research and clinical environment where precise control and contamination resistance is critical.

CytoGROW GLP Series is part of the SANYO MCO incubator product group that share proven control, construction and functional performance attributes. This relational product line extends the most sophisticated SANYO operating systems, offering more range of application and better continuity among users in the research and clinical community.

These double stacked, 6 cu.ft. (170 liter) CytoGROW GLP cabinet integrate SANYO's proven package of control, heating, gas control and construction features essential to all incubators. This design approach fulfills a broad range of common applications. Additionally, the standard CytoGROW GLP cabinet can be enhanced with a selection of options and accessories to meet specific end user needs, offering the industry's most flexible investment option for current and future incubator needs.

Also feature infrared sensors.
